00001
00001
                               Function: Initializes LISA system for use and performs preliminary
00001
                                           diagnostic checks. If all tests pass, the system then
00001
                                           does a keyboard scan to check for user input. If any key
00001
                                           is hit other than caps lock or the mouse button,
00001
                                           a menu is displayed on the screen showing the available
00001
                                           boot devices. If a valid COMMAND key sequence is detected,
00001
                                           a boot from an alternate device is attempted (see below).
00001
                                           If no keyboard input is detected, the system first checks
00001
                                           parameter memory for a valid boot device and, if none, defaults
00001
                                           to booting from a Profile attached to the builtin parallel port
00001
                                           for Lisa 1 systems.
00001
00001
                                           For Lisa 2 systems, a check is first made to verify a disk
00001
                                           (internal or external) is connected before defaulting to the
00001
                                           hard disk boot. If no disk is detected, the system defaults
```

```
10000
                                          to booting from the floppy drive.
00001

0000	;	2/24/82 - Add code for clock test and special
00001	;	burn-in cycling
0000	;	2/25/82 - Add code to simulate soft on switch
0000	;	pressed for COPS problem
00001	;	3/1/82 - Removed all changes since ROM 0.18
00001	;	release except for parity enabling,
0000	;	no reset feature, memory sizing change
00001	;	and Profile booting
00001	;	3/1/82 - Restore default stack ptr loc to \$300
0000	;	3/1/82 - Move default stack to \$0400, restore
00001	;	everything except MMU testing
00001	;	3/4/82 - Add MMU initialization and modify
0000 i	;	Twiggy, Profile boot routines for new
0000	;	load point
00001	;	3/10/82 - Add change for new I/O addresses and
00001	;	fix for Twiggy routine
00001	;	3/10/82 - Change contrast value for new I/O's
0000	;	3/15/82 - Add correction for Profile and COPS
0000	;	routines and display msg when booting
00001	;	3/17/82 - Restore version # at end of file
00001	;	3/18/82 - Release version 0.22
0000	;	
00001	;	4/5/82 - Make initial 2732 version (1.00); add
00001	;	following changes:
0000	;	1) correct MMU error routine bug
0000	;	2) change stack for CALL to \$0400
00001	;	3) add parity disable to WWP routine
0000	;	4) change MMU I/O space code to '9'
0000	;	5) add invalid boot code message
0000	;	4/6/82 - Add speaker click after COPS check
0000	;	4/7/82 - Add jump table entry for speaker
0000	;	routine, 1 second delay before "click"
0000	;	and alpha lock key check
0000	;	
0000	;	4/8/82 - Release version 1.00
0000	;	
0000	;	5/5/82 - Add I/O slot configuration check and
0000	;	I/O slot booting. Also add change to
0000	;	Profile read routine for PCR setting.
0000	;	5/12/82 - Add burnin power-cycling routine as
0000	;	boot option invoked by CMD/P.
0000	;	5/13/82 - Add changes for COPS command timing,
0000	;	Twiggy timeout, Twiggy booting, and
0000	;	add power-cycling routine.
0000	;	5/14/82 - Add fixes for booting via parameter
0000	;	memory and COPS timing experiment.
0000	;	5/17/82 - Add display of loop count and run time,

00001	;	and alter parameter memory useage for
00001	;	power-cycling option.
00001	.	5/18/82 - Add display of Twiggy errors, change
•	,	
0000	;	COPS routine for precheck code.
0000	;	5/20/82 - Add contrast reset for "warm start",
00001	;	add cycle value display, restore COPS
0000	•	timeout code.
	′	timeout code.
00001	;	
0000	;	5/21/82 - Release version 1.02
0000	;	
00001	•	5/26/82 - Begin addition of ROM monitor; set
•	•	-
00001	<i>;</i>	default to Apple if PM = 00.
00001	;	6/1/82 - Make following changes:
0000	;	 Memory sizing retry count to 64
00001	;	2) Save results on memory sizing errors
0000	, :	3) Update NMI routine to check for parity
•	,	
00001	;	errors.
0000	;	4) Restore default NMI vector after
0000	;	memory test.
00001	•	5) Create read clock subroutine and call
•	•	•
00001	,	when doing clock display.
00001	;	Add boot fix to save device id.
00001	;	6/1/82 - Change to new sizing algorithm and retry
00001	;	count back to 32.
00001	, :	6/3/82 - Convert to version 1.03
•	,	
00001	<i>;</i>	6/3/82 - Made following changes:
00001	;	1) Localize message display to TSTCHK
0000	;	2)Do clear screen only in INITVCT and
00001	;	in TSTCHK and second monitor level.
0000	•	3) Change default video page to last.
•	'	
00001	<i>;</i>	4) Complete first edition of monitor.
0000	;	6/7/82 - Modify monitor level2 user interface.
0000	;	6/10/82 - Made following changes:
00001	;	1) Add boot from Apple as CMD/A.
00001	•	2)Clear screen and display only in
•	'	
00001	;	routine TSTCHK.
0000	;	3) Add ROM checksum error bit.
0000	;	4) Add exception error check to TSTCHK.
00001	:	5) Add speaker click just before
0000	•	keyboard scan.
	,	<u>-</u>
00001	;	6)Reset to first video page for boot
0000	;	from Apple.
00001	į	7) Merge in changes from 1.03 file.
0000	•	8) Add parity error check to TSTCHK
•	, ·	
00001	<i>i</i>	9) Change power-cycling so that double
00001	;	bus fault used to restart diags
00001	;	6/11/82 - Made following changes:

0000 ;	1) Increase Twiggy timeout to 2 mins.
0000 ;	
·	2) Add 5 sec delay in power-cycle mode
0000 ;	before shutting down.
0000 ;	
0000 ;	6/14/82 - Release version 1.04
·	
0000 ;	6/22/82 - Add loop after COPS test if error
0000 ;	since keyboard not accessible. Also add
0000 ;	fix for NMI restore after memory test.
•	
0000 ;	6/30/82 - Made following changes:
0000 ;	1)Add parameter memory and I/O boot
0000 ;	checksum routines.
00001 ;	2) Remove boot id save to parameter
,	-
0000 ;	memory, except for power-cycle.
0000 ;	3) Change to new boot device id's.
00001 ;	7/1/82 - 1) Add changes for new Twiggy firmware.
,	
0000] ;	2)Add fixes for bugs in 1.04:
0000 ;	a) Add row setting before error display
0000 ;	to avoid writing over menu line.
00001 ;	b) Set device codes for Profile and
•	•
0000 ;	I/O slots to allow display if error.
0000 ;	c) Enable setting of timeout for Twiggy
0000	reads.
•	
0000 ;	d) Save error codes for I/O boot in
0000 ;	memory.
0000 ;	e) Add option of clearing memory in
0000 ;	INITMON routine.
•	
0000 ;	7/7/82 - Made following changes:
0000 ;	1) Modify checksum routines
0000 ;	2) Add keyboard/mouse check/reset code
•	and the contract of the contra
0000] ;	7/13/82 - Add speed parameter for new Twiggy code
0000 ;	7/14/82 - Add check for DSKDIAG in disk test,
0000 ;	change to new Twiggy error codes
0000 ;	
·	7/15/82 - Made following changes:
0000 ;	1) Add Profile routine updates.
0000 ;	2) Restore old boot id codes - new ones
0000 ;	used only when new Twiggy code
•	
0000 ;	released.
0000 ;	3) Upgrade burnin code for new parameter
0000 ;	memory usage.
0000 ;	4)Attempt to enable keyboard after MMU
	——————————————————————————————————————
0000 ;	errors.
0000 ;	5) Remove I/O boot checksum code until
0000 ;	conversion to new Twiggy code.
·	
0000] ;	6) Add video pattern display code
0000 ;	7) Remove characters from table and
0000 ;	make other changes to save bytes.
0000 ;	8) Upgrade service mode display option
,	o, opgrade service mode dispray option

00001	;	to handle count up to \$FFFF.
00001	;	
00001	;	7/16/82 - Create version 1.05
0000 i	;	7/19/82 - Add bug fixes for MMU testing, power-
00001	:	cycle memory testing, Profile boot
00001	•	and service mode display option.
· ·	<u>'</u>	and service mode display option.
0000	i	7/10/00 0 1 1 06
00001	;	7/19/82 - Create version 1.06
00001	;	7/20/82 - Add fix for MMU testing to properly
00001	;	record context in error
0000	;	
00001	;	7/20/82 - Release version 1.07
00001	į	7/21/82 - Make keyboard/mouse reset code changes
00001	;	and move check to before first "click"
00001	•	7/23/82 - Add extended memory tests
00001	,	7/27/82 - Add screen memory test and VIA tests.
00001	, ·	
•	<i>i</i>	Change default boot for new Twiggy code
00001	<i>;</i>	to upper Twiggy. Add conditionals for
00001	;	Apple code.
00001	;	7/29/82 - Add SCC test, optimize code.
00001	;	7/30/82 - Add RAM address uniqueness test.
0000	;	8/4/82 - Added the following:
0000	;	1) Twiggy mods for interleave
00001	;	2) Monitor options CONTINUE and LOOP
00001	· ;	3) Exception routine for line 1111 and
00001	:	line 1010 errors.
00001	•	8/9/82 - Add Twiggy mod for disk clamp, add mods
00001	' .	for kernel test failures such as screen
•	,	
0000	,	flash on MMU error.
00001	;	8/11/82 - Add memory sizing fix, increase delay
00001	;	for COPS and change default boot to
00001	;	TWIGGY!!
00001	;	8/12/82 - Begin code changes for new user interface
00001	;	and add hooks for icon display.
0000	;	8/14/82 - Add mods for Twiggy changes to monitor
00001	;	DSKDIAG line and add initial timeout.
00001	:	Continue user interface changes.
00001	, :	8/18/82 - Add mouse, cursor code and changes for
00001	•	8/23/82 - Add controls for 2716 version of ROM.
•	<u>'</u>	
0000	i	Add changes for Service mode to use
0000	;	pull down menu, eliminate keyboard
00001	;	queuing while awaiting input.
00001	;	8/24/82 - Add dialog box, and window to service
0000	;	mode with modified scroll and character
00001	;	output routines.
00001	;	8/25/82 - Add icons along with routines to display
00001	;	during test and for errors.
•	•	J

00001	;	8/27/82 - Add routines for displaying and using
0000	;	boot icon menu.
00001	;	8/30/82 - Add auto boot from Applenet.
00001	;	8/31/82 - Add minor additions to Service mode
00001	;	for Set and Loop options.
00001	· ·	
00001	•	8/31/82 - Create and do internal release of
00001	•	2716 (0.24), 2732 (1.15) and 2764 (2.00)
00001		ROM versions.
00001	, , , , , , , , , , , , , , , , , , ,	NOW VEISIONS.
00001	, , , , , , , , , , , , , , , , , , ,	0/0/02 - Add fives for I/O slot icon display
•	,	9/8/82 - Add fixes for I/O slot icon display
00001	<i>;</i>	and Profile icon display.
00001	;	9/9/82 - Add fix for reboot problem in 2716 ROM.
00001	;	Add serial # read routine and test for
00001	;	2732 and 2764 ROM versions. Expand
00001	;	stack for serial read routine.
00001	;	9/10/82 - Add fix for device code display for ROM
00001	;	versions 0.24 and 1.15.
00001	;	
00001	;	9/10/82 - Create and do internal release of new
00001	;	ROM versions 0.25, 1.16 and 2.01.
00001	;	
00001	;	9/13/82 - Add fixes for memory sizing and I/O
00001	;	slot booting.
00001	;	
00001	;	9/14/82 - Create and release ROM versions 0.26,
0000	;	1.17 and 2.02.
0000	;	9/22/82 - Add fixes and code for:
00001	;	1)Default video latch setting
00001	;	2) Mask for I/O and exception errors
00001	;	3) Message display on external calls
00001	;	to ROM monitor
0000	;	4) Contrast setting before screen test
0000	;	5)Disable of NMI key on power-up
00001	;	6)Boot failure after first load
0000	;	7) Error tones for failures
0000	;	8) Loop mode setting of NMI key
0000 i	;	9/23/82 - Add
0000	;	1) Power cycling
0000	· •	2) Full service mode menu
00001	;	3)Loop mode test choice display
00001	:	9/24/82 - Add dump memory option to service mode
00001	, :	9/25/82 - Modify display memory option to allow
00001	•	count and address data on same line
00001		9/29/82 - Add jump table entry for READMMU
00001		9/30/82 - Add jump table entry for READMMO 9/30/82 - Add:
	•	1) "No reset" feature
00001	,	I) "NO leset" leature

00001	_	2) Yeari for Dish parties for couries and
00001	;	2) Verify Disk option for service mode
00001	;	3)Optimize cursor routines and
00001	;	remove unused CursorShield routine.
00001	;	4) Invert rectangles when selected from
0000	;	keyboard.
0000	;	5)Display boot menu only if down keycode
00001	;	detected.
0000	;	10/5/82 - Add:
0000	;	1) Memory error decoding to board level
0000	;	2) New size and position for alert box
00001	;	3) New test icon display
00001	:	4)Diskette # for Twiggy errors
00001	·	10/6/82 - Add:
00001	.	1)Continue keyboard scan after COPS
00001	•	errors
	,	
00001	,	2) Set extended memory test bit for
00001	;	loop on memory test option
00001	;	3)Display I/O slot card # on errors
00001	;	4) Change boot menu to "pull-down" format
0000	;	5)Change to new icons
00001	;	10/7/82 - Add:
0000	;	1)SCC test
0000	;	<pre>2)Error if no serial # (allow continue)</pre>
0000	;	3) Two passes of memory tests for extended
00001	;	mode, one for regular mode
0000 i	:	10/9/82 - Create version 2.03
00001	•	10/10/82 - Add bug fixes and I/O slot ROM check in
00001		config scan.
00001	.	coming count
00001	•	10/12/82 - Create and release version 2.04.
	,	10/12/02 - Create and release version 2.04.
00001	,	10/10/100
00001	;	10/13/82 - Make following changes:
00001	;	1) Add keyboard reset code
00001	;	2) Remove SCC test
00001	;	3) Add bug fixes for making alert box
00001	;	and displaying bad keyboard
0000	;	10/14/82 - Add display of check marks for test icons
0000	;	10/18/82 - Add fixes for Monitor entry, Profile boot,
0000	;	looping on diag tests
00001	;	10/20/82 - Add message translations
00001	:	10/21/82 - 1) Adjust alert box and button dimensions
00001	•	2) Add boot from all ports on I/O slots
00001		3) Add fix for CMD key detection in monitor
00001	'	_
•	,	4) Change powercycle window to alert box
00001	<i>;</i>	5) Extend verify timeout to 4 minutes
00001	;	10/22/82 - 1)Add keyboard reset on external entry to ROM
00001	;	monitor

00001	;	2) Make Dump Memory routine conditional on
0000	;	final LISA ROM
0000	;	10/25/82 - 1) Change wait for disk error to branch to
0000	;	monitor - CONTINUE option then continues
0000	;	with the same boot device
0000	;	2) Change RETRY phrase to RESTART
0000	;	10/27/82 - Made following changes:
0000	;	1) RESET instruction on startup
0000	;	2) Jump table entries for access to memory
0000	;	test and display decimal routines
00001	;	3)Optimize warm start reset check and
0000	;	MMU error loop routines
0000	;	4)Change default video page to \$2F for
00001	;	no memory found.
0000 i	;	5)Rewrite screen memory test. Change main
0000 i	;	memory test to go from low memory
0000 i	;	to base of screen memory.
00001	;	6) Move inverse video check to after screen
00001	;	test, doing rewrite only of screen page.
0000 i	;	7) Add new boot failure code, with hooks to
00001	;	catch booting errors after ROM has
0000]	;	released control to boot loader for Twiggy
00001	:	and Profile booting.
00001	:	10/29/82 - Add display for uncompressed slot card icons.
00001	;	Modify TONE routine to init PCR reg.
00001	;	11/1/82 - Change external entry to monitor interface
00001	•	so that error code displayed on same line as
00001	;	message if no icon displayed
00001	:	11/3/82 - Made following changes:
00001	•	1) Move creation of test icon display till
00001	;	after keyboard reset so translation can
00001	;	be done if necessary
00001	:	2)Do cursor, mouse init only once so
00001	;	cursor posn not reset
00001	;	3) Optimize mouse, cursor routines
00001	:	4) Correct COPSCMD routine
00001	'	5) Upgrade check for Profile routine and
00001	:	optimize Profile read code
00001	:	11/8/82 - Conditionally add check for keyboard connected
00001		routine.
00001	:	11/9/82 - Create version 2.07
00001	•	11/11/82 - Modify ROM checksum algorithm
00001	:	11/12/82 - Add diskette eject on power-off
00001	•	11/13/82 - 1)Remove Dump Memory/Verify Disk from Service
00001	•	mode menu
00001	, :	2)Add speaker beep and specific read/write
00001	, :	loop for memory sizing and lo mem errors
00001	,	TOOP TOT MEMOTY STATING AND TO MEM ETIDIS

00001	;	11/15/82 - 1)Add keyboard/mouse disconnect check
00001	•	2) Remove memory "clear" from sizing test - now
•	,	
00001	;	done after memory testing
00001	;	11/16/82 - 1)Change power-cycle invoking to CMD/SHIFT/P
00001		
•	,	key sequence.
00001	;	Change customer monitor mode invoking to
00001	;	CMD/ENTER (on key pad) key sequence.
•	,	
00001	,	3) Add wait for profile loop in boot menu
0000	;	display routine
00001	•	4) Add timeout to general wait for clock
•	,	
00001	;	input routine
0000	;	5) Increase delay for poweroff wait loop
00001	•	6)Optimize character display routine
•	,	
0000	;	11/18/82 - 1)Add save of error code to special parameter
00001	;	memory area for use during burnin.
0000 i	•	2) Add context check for MMU testing
•	,	·
0000	;	3)Create version 2.08 for internal release
00001	;	11/19/82 - 1) Change initial position of cursor to center
00001	•	of screen.
•	,	or screen.
00001	;	
00001	;	11/19/82 - Release versions 2.08 (internal) and
00001		2.09 (for manufacturing)
•	,	2.09 (for mandracturing)
00001	;	
00001	:	12/15/82 - Add:
00001		
•	,	1) Setting of VIA PCR reg for later use
00001	;	2) Reset of keyboard before boot
00001	:	3) Fix for slot 3 card check for boot menu
00001		12/16/82 - Add:
•	,	
00001	;	1) Move Profile cmd buffer to location \$304
00001	:	2) Change default boot device to Profile
00001		
•	,	3) Remove support for third boot port on
00001	;	each slot
00001	•	4) Expand id range for test card search
•	,	
00001	;	5)Don't display Restart button after boot
0000	;	error
00001	:	6) New icons
•	'	·
00001	;	12/18/82 - Fix memory test bug
0000	;	
00001	:	1/3/83 - Fix bug in reporting parity circuitry
00001	'	
· ·	;	failure. Change version to 2.10.
0000	;	1/7/83 - Make following changes:
00001	:	1) Change keyboard sequences for I/O slot
· ·	<u>'</u>	
00001	;	booting
00001	;	2) Extend timeout for inital Profile check
00001	•	1/11/83 - Change SCC test to use max baud rate for
•	,	
00001	;	loopback test
00001	;	1/12/83 - Add running of expansion card status routines
•	•	

00001	;	when configuration check is done
00001	;	1/18/83 - Add fixes for:
00001	;	1)Continuing after memory error
0000 i	•	2) Checking for no reset function
00001	•	4)Read of I/O slot ROM for icon data -le 2 meg
-	,	·
00001	;	ensure odd address for icon count
00001	;	5) Default boot setting when loop on memory
00001	;	test selected
00001	;	1/21/83 - Add save of disk controller self-test status
00001	;	
00001	;	1/28/83 - Create and release ROM version 2.11
-	, , , , , , , , , , , , , , , , , , ,	1/20/03 Cleate and Telease Not Version 2.11
00001	;	
00001	;	3/15/83 - Extend Profile timeout for case where drive
00001	;	may be parking head. (bug RM016)
00001	;	4/20/83 - Add fixes for:
0000 i	•	1) Memory sizing (bug RM015).
00001	•	2) Garbage sent out serial port (RM014).
•	,	
00001	;	3) Removed 6504 (bug RM013).
00001	;	4) Never ready Profile (bug RM011).
00001	;	Also do some code optimization in icon
00001	;	routines to make room for fixes. (RM000)
00001	;	4/22/83 - Do code optimization for setting bus error
00001	;	vector (labeled as RM000).
•	<u>'</u>	·
00001	i	Add changes for following requests:
00001	;	1)Display ROM id's on bootup (CHG001)
00001	;	2)Loop on address 1Meg-2 if sizing error (CHG002)
00001	;	3) Turn off contrast before doing poweroff (CHG003)
00001	;	4) Change copyright notice. (CHG005)
00001	•	Also modify alert msq display routine (CHG005).
00001	•	4/26/83 - Add loop on CPU diags if no memory or I/O
•	, , , , , , , , , , , , , , , , , , ,	
00001	<i>;</i>	board installed. Also toggle LED. (CHG004)
00001	;	4/27/83 - Do only basic memory test on warm-start. (CHG006)
00001	;	Add fix for NMI bug (RM010).
00001	;	5/9/83 - Made following changes:
00001	;	1) Change ROM id display to rev # (D) (CHG001)
00001	•	2) Change ROM test failure to loop at fixed address
00001		\$00FE00C8 (end of jump table) (CHG007)
-	,	
00001	;	3) Make correction for screen not cleared when
00001	;	continuing from I/O slot error to boot menu.
00001	;	(CHG008)
00001	;	5/10/83 - Add change to enable display of uncompressed icons
00001	;	upon external entry to ROM Monitor (CHG008).
00001	•	apon dicernal circly to not resident (circle).
-	<u>'</u>	E/12/02 Charte and release your D of heat 70%
00001	;	5/12/83 - Create and release rev D of boot ROM.
00001	;	
00001	;	8/8/83 - Add changes for Pepsi system: (CHG009)
00001	;	1) New icons.
•	•	·

0000)	;		Display of icons with id #'s.
0000	11	:	8/9/83 -	Add save of disk ROM id in low memory. (CHG010)
0000	•		0,0,00	Add fixes for:
	•	,		
0000	¹ 1	;		1) SCC init for Applebus. (CHG011)
0000) 	;		2) Test card boot search. (CHG012)
0000)	;	8/10/83 -	Delete inverse video check. (CHG013)
0000	ni		, ,	Add fix to beep routine. (CHG014)
		<i>'</i>	0/16/02	-
0000	•	<i>i</i>	8/16/83 -	
0000) 	;		add routines to decode parity error to
0000	91	;		chip. (CHG015)
0000	01	:	9/1/83 -	Add retry for hard disk booting. (CHG016)
0000	•	•	-, -,	Add jump table entry for write to
	•	,		
0000	¹ 1	;		parameter memory routine. (CHG017)
0000) 	;	9/2/83 -	Add new font, modify display routines. (CHG018)
0000)	;		Add wait for hard disk ready when
0000	ni			power-cycling. (CHG019)
		<i>'</i>	0/6/02	
0000	•	<i>i</i>	9/6/83 -	Add setting of video latch whenever boot
0000) I	;		error causes jump to ROM low memory default
0000	01	;		vectors. (CHG020)
0000	01	:		Add fix for memory test/initialization

0566|
                                Remainder of MMU regs in context 0 are set to invalid page
05661
05661
                                Register Usage:
05661
                                     A0 - low physical address
                                                                       D0 - scratch/value stored in base reg
05661
                                     A1 - high physical address
                                                                       D1 - value stored in limit reg
05661
                                     A2 - MMU base reg ptr
                                                                       D2 - unused
05661
                                     A3 - MMU limit reg ptr
                                                                       D3 - holds base reg page incr value
05661
                                     A4 - used for return address
                                                                       D4 - used for count of regs to set
```

```
05661
                                    A5 - MMU address increment
                                                                     D5 - low physical page
05661
                                    A6 - not used
                                                                     D6 - high physical page

                               BASIC MEMORY TEST - writes pattern and its complement in memory location,
0EB0 |
                                                     then verifies by reading. Also does second scan as
0EB0 I
                                                     addressing check. Uses long word operations for speed.
0EB0 |
                               Inputs:
0EB0 |
                                     A0 - Starting address to test
0EB0 |
                                     A1 - Ending address
0EB0 |
                                     A4 - Return address
0EB0 |
                               Outputs:
0EB0 |
                                      CCR zero bit set if no error
0EB0 |
                                     D3 = OR mask of errors
0EB0 |
                               Uses registers:
0EB0 |
                                     A0 = current test address
                                                                       D0 = current test pattern
```

```

                                Phase 1 Parity error handler for memory tests. Objective for handler is to
0F14|
                                isolate parity error to chip level.
0F14|
                                Assumes:
0F14|
                                     D0 = expected data pattern
0F14|
                                     A0 = error address or address + 4
0F14|
                                Uses registers:
0F14|
                                     D1 = parity error address
0F14|
                                     D2 = search size for byte in error
0F14|
                                     D3 = low memory address
0F141

1008
                             ; SCC Test (Checks RS232 port controller)
1008
1008
                                The SCC interrupt vector is written and read with all 8 bit patterns
                                to check SCC addressing. An internal loopback test is then done on
1008
10081
                                channel B.
                                                                                                                        RM014
1008
1008
                                The chip is always left in an initial state as follows:
1008
                                     both channels are reset
1008|
                                     master interrupt enable is reset
1008
                                                                                                                        CHG011
                                     DTR, RTS outputs set high on channel B
1008|
1008
                                Runs with interrupts off, uses stack. Uses registers:
10081
1008
                                A0 = SCC address
                                                                      D0 = error indicator

2F2A
2F2AI
                                Written by Rick Meyers
2F2A|
                                 (c) Apple Computer Incorporated, 1983
2F2A
2F2AI
                                The routines below provide an assembly language interface to the mouse.
2F2A
                                Input parameters are passed in registers, output parameters are returned
2F2AI
                                in registers. Unless otherwise noted, all registers are preserved.
2F2AI
2F2A
                                The Mouse
2F2A
2F2A
                                The mouse is a pointing device used to indicate screen locations. Mouse
2F2A|
                                coordinates are located between pixels on the screen. Therefore, the
2F2A
                                X-coordinate can range from 0 to 720, and the Y-coordinate from 0 to 364.
2F2A
                                The initial mouse location is 0,0.
2F2A
2F2A|
                                Mouse Scaling
2F2AI
2F2A
                                The relationship between physical mouse movements and logical mouse
2F2A
                                movements is not necessary a fixed linear mapping. Three alternatives
2F2AI
                                are available: 1) unscaled, 2) scaled for fine movement and 3) scaled
2F2A
                                for coarse movement.
2F2A
2F2A|
                                When mouse movement is unscaled, a horizontal mouse movement of x units
2F2A
                                yields a change in the mouse X-coordinate of x pixels. Similiarly, a
2F2A|
                                vertical movement of y units yields a change is the mouse Y-coordinate
2F2A
                                of y pixels. These rules apply independent of the speed of the mouse
2F2A|
                                movement.
2F2A
2F2AI
                                When mouse movement is scaled, horizontal movements are magnified by 3/2
```

```
2F2A|
                               relative to vertical movements. This is intended to compensate for the
2F2AI
                               2/3 aspect ratio of pixels on the screen. When scaling is in effect, a
2F2A|
                               distinction is made between fine (small) movements and coarse (large)
2F2A
                               movements. Fine movements are slightly reduced, while coarse movements
2F2AI
                               are magnified. For scaled fine movements, a horizontal mouse movement of
2F2AI
                               x units yields a change in the X-coordinate of x pixels, but a vertical
2F2A
                               movement of y units yields a change of (2/3)*y pixels. For scaled coarse
2F2A
                               movements, a horizontal movement a x units yields a change of (3/2)*x
2F2A
                               pixels, while a vertical movements of y units yields a change of y pixels.
2F2A
2F2A
                               The distinction between fine movements and coarse movements is determined
2F2A|
                               by the sum of the x and y movements each time the mouse location is
2F2A
                               updated. If this sum is at or below the 'threshold', the movement is
2F2AI
                               considered to be a fine movement. Values of the threshold range from 0
2F2A
                               (which yields all coarse movements) to 256 (which yields all fine
2F2A
                               movements). Given the default mouse updating frequency, a threshold of
2F2AI
                               about 8 (threshold's initial setting) gives a comfortable transition between
2F2A
                               fine and coarse movements.
2F2A

                               The Cursor
2FCC|
2FCC I
                               The cursor is a small image that is displayed on the screen. It's shape
2FCC I
                               is specified by two bitmaps, called 'data' and 'mask'. These bitmaps are
2FCC|
                               16 bits wide and from 0 to 32 bits high. The rule used to combine the
2FCC I
                               bits already on the screen with the data and mask is
2FCC|
2FCC |
                                   screen <- (screen and (not mask)) xor data.
2FCC|
2FCC |
                               The effect is that white areas of the screen are replaced with the cursor
2FCC |
                               data. Black areas of the screen are replaced with (not mask) xor data.
2FCC I
                               If the data and mask bitmaps are identical, the effect is to 'or' the data
2FCC |
                               onto the screen.
2FCC |
2FCC1
                               The cursor has both a location and a hotspot. The location is a position
